Projects

Wordpress

Used various tools and plugins to develop the websites. And also used custom code whereever needed in the projects.

Websites:

Developed and deployed 10+ major projects and many internal projects. Used various technologies such as PHP Laravel, ReactJS, AngularJS to develop the websites and also used databases such as MySQL, PostGRESQL etc. Some of other technologies used are HTML5, CSS3, Javascript, jQuery and Ajax.

AWS(All Weather System) data monitoring

AWS Data Monitoring project shows the data according to AWS stations placed at different locations in Uttrakhand state. This data is filtered into tabular form and shows data chart wise for different climate variables such as temperature, rainfall, windspeed etc. It is a internal project used in the research field.

Technology used:

- Database: Postgres SQL
- Framework: PHP(Laravel)
- Bootstrap, HTML5, CSS3, JQuery, Ajax

Antriksh Jigyasa Portal

In this project, I have used PHP and MySQL databases. It is used for the CRUD operations of all the modules present in the main web portal(mentioned below).

URL: https://jigyasa.iirs.gov.in/

Admin Panel for internal projects

I was engaged in all admin panel projects. Admin Panel functionalities for different management projects including roles and policies.
